

## Developer Workflow:

- Clones or Pulls "Develop" repo – develop branch to local
- Modifies local develop branch and commits locally
- Tests mods locally and fixes as needed
- Compares to origin/develop and merges as necessary
- Pushes to origin/develop
- Advises admin that mods are available ?
- Tests on development machine when available
- Advises admin that mods are tested
- Tests on production when available

Admin Workflow: (To be determined)

- Waits to be notified by developer that mods are ready to be pushed to production
- Pulls dev repo developer branch to local
- Tests mods locally and advises developer if fixes needed
- Pushes to production repo master branch
- Advises developer that mods are available for testing on the production machine
