

Developer Workflow:

- Clones "Develop" repo – develop branch to local
- Modifies local develop branch and commits locally
- Tests mods locally and fixes as needed
- Compares to origin/develop and merges as necessary
- Pushes to origin/develop
- Advises admin that mods are available ?
- Tests on development machine when available
- Advises admin that mods are tested
- Tests on production when available

Admin Workflow: (To be determined)

- Clones "Develop" repo – main branch to local
- Pulls developer branch when advised
- Modifies project and commits locally
- Tests mods locally and fixes as needed
- Pushes to "Develop" repo github-name branch
- Advises admin that mods are available
- Tests on development machine when available
- Advises admin that mods are tested
- Tests on production when available
